

Company Overview

Hampton-Clarke (HC) is a privately held Women-Owned, Disadvantaged, Small Business Enterprise focused on providing high-quality environmental services to a diverse range of clients since 1986. HC has extensive experience analyzing environmental samples and reporting data for federal, state, and local regulatory programs in the Northeast. HC's laboratory is designed to conduct analysis of large volumes of environmental samples for standard and rapid turnaround in support of various programs efficiently utilizing state-of-the-art equipment and automated systems to provide greater sensitivity and enhanced data quality. Our experienced analysts and responsive customer service team support small and large-scale projects. A majority of HC laboratory analyses include soil and water for environmental site investigation, remediation, and permit compliance programs.

TESTING SERVICES – NELAC-accredited/certified in NJ, NY, PA, DE, CT, and KY HC offers a full range of environmental laboratory capabilities for organic and inorganic analysis of various matrices including water, wastewater, sediment, soil, and waste. Our experienced staff follow laboratory SOPs that include approved state and federal protocols for EPA SW-846 series, CWA series, Standard Methods, and NELAP methods.

FIELD SAMPLING – HC's field services team assists clients in the proper acquisition and handling of environmental samples following proper Federal and local sampling protocols for soil, surface water, wastewater, groundwater, sediment, air, and waste. Our field team also provides collection of certified "analyze immediately" field parameters (pH, temperature, DO, redox potential, salinity, and ferrous iron), is trained in proper decontamination procedures and chain-of-custody protocol, and holds current 40-hour HAZWOPER certifications as well as SWAC and TWIC registry.

COURIER SERVICES – HC's couriers are trained in sample handling, transportation protocols, and maintaining sample custody, striving for the timely delivery/pickup of samples. Daily shuttles from our Mt. Laurel and Fairfield locations are made for efficient sample receipt/login while proper chain-of-custody protocols are maintained.

CONSTRUCTION SUPPORT – HC's soil and waste management services include on-site coordination and management of hazardous/non-hazardous waste streams. HC's on-site sampling team and our in-house lab would match an analytical approach to selected disposal facilities offering clear/precise data allowing rapid disposal decisions. As many project schedules hinge upon our services, we are accustomed to meeting strict deadlines. HC will coordinate with waste disposal facilities to provide clients with the best disposal alternatives to maximize savings.
